

## EUSALP Landscape Conference

### Alpine landscapes and renewable energies in times of climate crisis

The EUSALP Landscape Conference deals with the transformation processes of Alpine landscapes in the context of the ongoing climate crisis. The aim is to foster an exchange about land use conflicts related to renewable energy production.

Climate change is already occurring at increasing speed in the Alps. On the one hand, this crisis is transforming the natural site conditions, for example through glacier retreat, thawing permafrost, the shifting of vegetation zones or urban heat islands. On the other hand, measures to adapt to climate change, such as increased protective measures against natural hazards, can have a significant impact on landscapes. The promotion of landscape qualities can in turn be a societal response to climate challenges including preserving peatlands for CO<sub>2</sub> storage or fostering urban greening to cool cities.

Take part in the EUSALP Landscape Conference and join the discussion to find sustainable solutions and possible strategies to address these challenges in spatial planning, renewable energy production and land use.

Interpretation will be available throughout the event in English, German and Italian.

#### When?

Tuesday, 24<sup>th</sup> of May 2022

Wednesday, 25<sup>th</sup> of May 2022 with a thematic excursion to different landscape types

#### Where?

EURAC Research, Viale Druso/Drususallee 1, 39100 Bolzano/Bozen (IT)
